REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The closest prior art, Dunn, teaches a non-polymeric sustained release system comprising a microstructure reservoir system containing active agent. Dunn, however, does not teach a hydrophobic polymer carrier system comprising particles combination comprises particles of an active ingredient, particles of a carbonate, and particles of a substance that reacts with the carbonate in an aqueous solution to generate carbon dioxide; wherein the release rate of the active ingredient from the formulation is accelerated in a body fluid. The present specification shows that the claimed particles combination results in compositions having accelerating release rate of an active ingredient (see for example Fig. 1).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
